

LEADING THE WAY IN PREMIER OIL AND GAS FIELD SERVICES SINCE 1970

Who We Are

Family-Owned

Started in 1970 by Paul Plants and George Goodwin, P&G is still family-operated to this day, ensuring the same standard of excellence that we started with.

Ready to Act

We own all of our own cementing equipment, transportation assets and our own construction assets. For you, that means turnkey services exactly when you need them, not weeks or months down the line.

Built on Partnerships

We believe that your reputation matters. We aim to treat everyone the right way, whether it's our own team or our clients.

Our Services

Completions & Well Services

Whether putting new wells into production or extending the life of your current inventory, P&G has solutions that fit your needs. We have API-certified workover rigs with derrick heights ranging from 96' to 112' for BOP size and configuration flexibility and hook load capacities up to 300,000 lbs. Our experienced professionals make your completions and well service projects easy and efficient.

Cementing & Pressure Pumping

P&G offers twin cement pumps, batch mixers, and other fluid pumps ranging from 600hp to 1,250hp. With bulk transport assets capable of moving up to 1,500 sacks of dry blend at a time, P&G can meet your toughest oilfield cementing demands.

Plug & Abandonment

With 50 years of experience, P&G knows P&A. We provide turnkey plug and abandonment services to quickly and safely decommission abandoned wells in a budget-friendly way. We oversee projects from start to finish and work directly with you for a culture of safety and environmental stewardship.
